Engine 1 is the frontline engine responding to the residential and commercial district of Lake City. Replacement of this truck will allow for added points to our ISO rating and saving in annual maintenance of this aging vehicle. Remodel of station 1 will allow the station to be updated and placed back to its new state. With limited budget funds, living spaces have been neglected and somewhat patched. This space is lived in 24 hours per day by 8 personnel. We feel that this space should be comfortable to those living and working here and to our visitors who come in on a daily bases.

**c. What direct services will be provided to citizens by the appropriation project?**

Again, Engine 1 is the first out engine to all residential and commercial buildings in Lake City. Currently this truck has to stay connected to an air compressor in order to be ready to respond.

**d. Who is the target population served by this project? How many individuals are expected to be served?**

The target population is all of the residents and commercial businesses of Lake City. We serve 12,000 residence in our area.

**e. What is the expected benefit or outcome of this project? What is the methodology by which this outcome will be measured?**

The expected benefit is to reduce the burden to our local taxpayers by not having to increase the fire assessment or borrow money to pay for a new fire engine.

**f. What are the suggested penalties that the contracting agency may consider in addition to its standard penalties for failing to meet deliverables or performance measures provided for the contract?**

Forfeiture of funds.
