11. Program Performance

- a. What specific purpose or goal will be achieved by the funds requested?

Design, Permitting and Construction of new wells to lower floridan aquifer to support continued economic development of the area and provide sustainable long term water source for the future

- b. What activities and services will be provided to meet the intended purpose of these funds?

These funds will go directly towards installing a new well to the lower floridan aquifer.

- c. What direct services will be provided to citizens by the appropriation project?

Municipal water service

- d. Who is the target population served by this project? How many individuals are expected to be served?

Groveland has an approximate population of 14,000. The City is projected to grow substantially over the next several years with major developers breaking ground and targeting land in the area.

- e. What is the expected benefit or outcome of this project? What is the methodology by which this outcome will be measured?

Currently, the City is pushing up against their consumptive use permit with the Water Management District. Local wetlands and lakes are being impacted by shallow well pumping. A lower well will provide a more sustainable long-term water solution, take pressure off the lakes and wetlands and facilitate future community growth and economic improvement

- f. What are the suggested penalties that the contracting agency may consider in addition to its standard penalties for failing to meet deliverables or performance measures provided for in the contract?

Withholding future allocations or repayment
