a. What specific purpose or goal will be achieved by the funds requested?

### The Florida Senate Local Funding Initiative Request Fiscal Year 2023-2024

LFIR # 1309

MECCA Hub aims to attract and train students, who might not otherwise consider or be prepared for a mechatronics pathway to gain the skills for these in-demand and high-wage jobs. As MECCA helps to fill the 200,000 new jobs in STEM fields in Florida expected by 2030, it will also develop partnerships in engineering, technology, and robotics industries to identify the best curriculum, secure state-of-the-art specialized equipment, and create an immerse and applied learning environment. These funds will allow MECCA to be created, staffed, and aligned with industry to achieve these goals.

### b. What activities and services will be provided to meet the intended purpose of these funds?

MECCA Hub aims to attract and train students, who might not otherwise consider or be prepared for a mechatronics pathway to gain the skills for these in-demand and high-wage jobs. As MECCA helps to fill the 200,000 new jobs in STEM fields in Florida expected by 2030, it will also develop partnerships in engineering, technology, and robotics industries to identify the best curriculum, secure state-of-the-art specialized equipment, and create an immerse and applied learning environment. These funds will allow MECCA to be created, staffed, and aligned with industry to achieve these goals.

c. What direct services will be provided to citizens by the appropriation project?

MECCA Hub direct services will include: workforce training, advisement, student success coaching, tutoring and other academic support, guest lectures from industry, hands on experiential learning, internships/visits, career exploration and job placement support. Students will earn stackable credentials (industry certifications, college credit certificates and associate degrees) in engineering, automation, or manufacturing amongst others.

d. Who is the target population served by this project? How many individuals are expected to be served?

MECCA Hub expects to extend the services to over 1,600 students currently in the MDC pipeline with interests in engineering, technology, robotics, architecture, and animation/graphic arts. Outreach will also be made to direct entry students from high schools (FTIC), non-traditional adults, displaced workers, and individuals in-field seeking to up skill and credentials. This population tends to be under-served as 67% of Miami Dade College students live below the national poverty line and 50% of the direct entry students are first generation college students.

e. What is the expected benefit or outcome of this project? What is the methodology by which this outcome will be measured?

MECCA Hub will introduce students to workforce readiness skills in mechatronics using high impact teaching and learning strategies. By end of Fall, 50% of students will be exposed to mechatronics with 80% of those able to receive academic/student services from a student success coach or advisor through career exploration activities in Spring. One hundred students will be awarded stipends to support internships or research. Two faculty members will receive training to use equipment or learn the latest trends in the field. A panel of business and industry experts (that will be operational within the first quarter and continue to meet quarterly) will help align the curriculum to industry needs.

f. What are the suggested penalties that the contracting agency may consider in addition to its standard penalties for failing to meet deliverables or performance measures provided for the contract?

Work with the agency to determine appropriate performance metrics and reporting for the project.
