I. SUMMARY:

This resolution proclaims May 1997 as "Stroke Awareness Month" in Florida.

II. SUBSTANTIVE ANALYSIS:

A. PRESENT SITUATION:

A stroke (or brain attack) occurs when a blood vessel bringing oxygen and nutrients to the brain ruptures or is clogged by a blood clot or some other particle. Stroke ranks as the third leading killer in the U.S. after heart disease and cancer, accounting for about 150,000 deaths per year. Stroke is predominantly a disorder of the elderly, but also strikes younger people, particularly those ages 45-65 years of age. Nationally, about one in seven people who die from stroke is under age 65. Stroke is also the third leading cause of death in Florida, with an age-adjusted rate of 24.3 deaths per 100,000 population. In 1995, stroke accounted for 9,821 deaths (or about 6.5%) in Florida.

Because stroke is a cerebrovascular disease, it is associated with cardiovascular disease risk factors such as high blood pressure and cholesterol. There are several ways to lower the chance of having a stroke. These include monitoring one's blood pressure through annual check ups, eating nutritious food in moderate amounts, and engaging in regular, aerobic exercise.

In addition to prevention, recent advances in stroke treatment point to the importance of initiating treatment within 1 hour after the onset of symptoms. Rapid response has been shown to reduce both the fatality rate and the degree of disability in stroke survivors. An important element in achieving this end is educating the public about the need to recognize the symptoms of stroke and activating the emergency response system.
