

SENATE STAFF ANALYSIS AND ECONOMIC IMPACT STATEMENT

(This document is based on the provisions contained in the legislation as of the latest date listed below.)

Prepared By: Banking and Insurance Committee

BILL: SB 2162

INTRODUCER: Senator Baker

SUBJECT: Manufactured Housing and Mobile Home Mitigation and Enhancement Program

DATE: April 21, 2006

REVISED: _____

| | ANALYST | STAFF DIRECTOR | REFERENCE | ACTION |

Please see last section for Summary of Amendments

- Technical amendments were recommended
- Amendments were recommended
- Significant amendments were recommended

I. Summary:

The bill creates the Manufactured Housing and Mobile Home Mitigation and Enhancement Program to be developed and implemented by Tallahassee Community College (TCC) with input on the program's development from specified stakeholders. The program is to provide grant money to mobile or manufactured home owners, parks, and communities for hurricane mitigation measures. Once a homeowner, park, or community completes the program, the bill requires Citizens Property Insurance Corporation (Citizens) to grant insurance discounts, credits, or other rate differentials or hurricane deductible reductions for the mobile homeowner's insurance premium for the year the program is completed and for subsequent years if the homeowner renews his or her property insurance with Citizens. The bill requires Citizens' property insurance premiums to reflect the location of the home and the home's compliance with the Florida Building Code adopted after Hurricane Andrew. Finally, the bill provides a \$7.5 million appropriation from the General Revenue Fund to TCC for the program.

This bill creates unnumbered sections of the Florida Statutes.

II. Present Situation:

Florida has the largest number of mobile homes of any state in the nation and the highest number of mobile homes owned by the elderly, although information varies on the number and age of

mobile homes in Florida.¹ The University of Florida's Shimberg Center estimates mobile homes represent 12 percent of the housing stock and house 10 percent of the state population.² The 2000 Census report estimates there are over 600,000 mobile homes in Florida, 85 percent of which were built before 1995.³ According to another source, the 2000 Census counted almost 850,000 mobile homes in Florida, most of which were built before 1995.⁴ Thus, although there is conflicting data regarding the number of mobile homes in Florida, data is consistent regarding the age of Florida mobile homes. That data reveals the majority of Florida's mobile homes were built prior to 1995.

In a study, the Federal Emergency Management Agency (FEMA) estimated Florida has a maximum number of 829,553 pre-1994 mobile homes.⁵ Additionally, FEMA estimates 847,000 mobile homes in Florida have lower anchoring standards as Florida did not implement its updated mobile home tie down standards until 1999.⁶ A study done by the International Hurricane Research Center at Florida International University found 85.5 percent of mobile homes in Florida were built before 1994. In addition, it found 338,000 mobile homes in Florida were built prior to 1976 and 643,000 were built between 1976 and 1994.⁷

Regulation of the Manufacture of Mobile Homes - In 1974, Congress designated the U.S. Department of Housing and Urban Development (HUD) to set standards for the construction of mobile homes. On June 15, 1976, new nationwide regulations were implemented and HUD took full control over the manufacture of mobile homes. Mobile homes were constructed to the same standards nationwide until 1994 when HUD implemented changes in response to damage from Hurricane Andrew. The changes implemented three wind zones, with HUD specifying the wind zones for all areas of the United States. The changes also required mobile homes to be manufactured for each wind zone and restricted mobile home dealers from selling a mobile home to a customer that is not designed for the wind zone area where the customer intends to install the home.⁸

HUD designates wind zones in Florida by county and requires mobile homes to be placed in a wind zone to be manufactured to standards designed for the wind zone. For example, a mobile home located in a Type III Wind Zone must be built to withstand winds of 110 miles per hour. Type III wind zones are located primarily in coastal counties along Florida's southwest and southeast coasts, south of Lake Okeechobee. HUD has designated all counties in Florida as either a Type II or Type III Wind Zone. Type II Wind Zones must contain mobile homes able to

withstand winds of up to 100 miles per hour. Prior to the implementation of wind zones by HUD in 1994, mobile homes were built to withstand winds of 70 miles per hour.⁹

Mobile homes built before 1994 are not built in accordance with the wind standards implemented by HUD. In 1996, the Department of Highway Safety and Motor Vehicles (DHSMV) began regulating the installation of mobile homes in Florida. Florida implemented more stringent tie-down standards, by rule, in 1999.¹⁰ Florida's mobile home installation program is generally considered a model for the United States.¹¹

DHSMV's assessment of mobile home damage after the 2004 hurricanes showed homes constructed after 1994 (in accordance with the enhanced construction requirements by HUD) withstood hurricane force winds and remained intact with minor to no damage. Homes installed pursuant to the more stringent tie-down standards remained on their foundation with no movement. Although DHSMV found some destroyed mobile homes in their assessment, many of the destroyed homes were installed prior to the enhanced tie-down standards were implemented.¹² DHSMV found similar results in its assessment of mobile home damage due to Hurricane Wilma in 2005.¹³

Availability of Hurricane Insurance for Mobile Homes - Many in the mobile home industry have commented on the lack of homeowners' insurance for mobile homes in the private market. The number of mobile home policies issued by Citizens Property Insurance Corporation (Citizens) supports this allegation. Because Citizens is a joint underwriting association, it acts as an insurer of last resort. In other words, a property is eligible for coverage with Citizens only if there is no other offer from an authorized insurer. By law, Citizens' premiums must be higher than those in the private voluntary market. Citizens currently insures over 110,000 mobile homes.

Citizens' mobile home policies in their personal lines account jumped from 12,028 in October 2003 to 62,029 in October 2005 (a 2-year period) and the number of such policies in their high risk account jumped from 12,552 to 14,056 for the same time period.¹⁴ Also, although new

¹⁴ The Task Force on Long Term Solutions to Florida's Hurricane Insurance Market report adopted March 6, 2006, page 28. The personal lines account covers homeowners, mobile homeowners, dwelling fire, tenants, condominium unit owners and similar policies. The high risk account covers personal lines windstorm-only policies, commercial residential wind-only policies and commercial non-residential wind-only policies.

insurers are entering the market and are writing hurricane insurance for mobile homes, they are restricting their coverage to post-1994 mobile homes.¹⁵ Additionally, a number of insurers historically writing hurricane insurance for mobile homes have revised their underwriting guidelines to exclude older mobile homes.¹⁶

Hurricane Mitigation Premium Credits - Since 2003, insurers have been required to provide premium credits or discounts for residential property insurance for properties on which construction techniques had been installed which reduce the amount of loss in a windstorm. These construction techniques include roof strength, roof covering performance, roof-to-wall strength, wall-to-floor-to-foundation strength, opening protection, and window, door, and skylight strength, etc.¹⁷ Individual credits generally range from 3 percent to 25 percent and a fully mitigated home can qualify for total credits ranging from 20 percent to 42 percent off its wind insurance premium.

Typically, policyholders are responsible for substantiating to their insurers the existence of loss mitigation features in order to qualify for credits. This often requires some sort of certification or inspection. Insurers may allow homeowners to self-certify some features such as roof shape or number of stories, but require an engineer, building inspector, architect, or licensed building contractor to certify the more technical features such as roof deck attachment. Section 627.711, F.S., requires insurers to notify their policyholders or potential policyholders at policy issuance and renewal about the availability and range of credits or discounts for making wind mitigation improvements to their homes.

Current law requires premium credits, discounts, or other rate differentials for mobile home owners that insure mobile homes constructed post-1994 and installed pursuant to the stringent tie-down standards implemented in 1999.¹⁸

Hurricane Loss Mitigation Funding – Section 215.559, F.S. directs the Legislature to annually appropriate at least \$10 million from the Florida Hurricane Catastrophe Fund (FHCF), but no more than 35 percent of the investment income from the prior fiscal year for hurricane loss mitigation programs.¹⁹ Actual annual legislative appropriations have ranged from the minimum \$10 million to \$30 million. The Hurricane Loss Mitigation Program (Mitigation Program) within the Department of Community Affairs (DCA) was created in 1999, with an annual appropriation of \$10 million from the FHCF, to fund programs for improving the wind resistance of residences and mobile homes to prevent or reduce losses or reduce the costs of rebuilding after a disaster.²⁰ Three (\$3) million from the Mitigation Program is statutorily directed to retrofitting public facilities to be used as hurricane shelters while the remaining \$7 million, is appropriated for the Residential Construction Mitigation Program (RCMP) administered by DCA and statutorily allocated as follows:

- 40 percent (\$2.8 million) is used to inspect and improve tie-downs for mobile homes;

¹⁵ *Id.* at page 35.

¹⁶ *Id.* at page 28.

¹⁷ s. 627.0629, F.S. (2005).

¹⁸ s. 627.0629(3), F.S. (2005).

¹⁹ s. 215.555(7), F.S. (2005).

²⁰ s. 215.559, F.S. (2005).

- 10 percent (\$700,000) is directed to the Type I Center of the State University System dedicated to hurricane research, e.g., Florida International University; and
- The remainder (50 percent or \$3.5 million) is generally directed to programs developed by the DCA with advice from an Advisory Council to help prevent or reduce losses to residences and mobile homes or to reduce the cost of rebuilding after a disaster.

The current tie-down program for mobile homes funded by s. 215.559, F.S. is operated by TCC.

III. Effect of Proposed Changes:

The bill creates the Manufactured Housing and Mobile Home Mitigation and Enhancement Program. The purpose of the program is to enhance and improve the performance of mobile homes during hurricanes in order to reduce property loss. The bill does not contain any specifics relating to the establishment, purview, qualifications, or procedures of the program. Rather, it requires TCC to develop the program with input from the Federation of Manufactured Home Owners of Florida, Inc., the Florida Manufactured Housing Association, and the DHSMV.

The bill requires the program to be run as a grant program; however, does not specify if or how TCC is to determine what persons, properties, or entities qualify for the grants or for the program. The bill does not specify the grants provided by the program are to be used by mobile homeowners or mobile park or community owners for implementation of hurricane mitigation measures, although this is implied in the bill. Additionally, the bill does not specify the dollar amount of the grants to be given to eligible recipients. The bill provides a direct appropriation of \$7.5 million to TCC for program use.

The bill notes the grant program should attempt to ensure entire manufactured home communities and mobile home parks are improved wherever practicable, but does not specify a funding priority between mobile homeowners and the communities and parks. The bill specifies the program must include an education and outreach component designed to inform mobile homeowners about the program and the availability of grants.

The bill requires the program to include hurricane mitigation or enhancement of mobile homes for the areas of concern raised in the 2004-2005 Hurricane Reports done by DHSMV. The 2005 Hurricane report from DHSMV which outlines damage from only Hurricane Wilma found primarily light damage to mobile homes in hurricane affected Collier, Lee and Miami-Dade counties (other than storm surge flood damage). There was more damage to mobile homes in the north portion of Miami-Dade County at the Broward County line. In Broward County, there was light to severe damage to mobile homes. In all affected counties, the only mobile homes destroyed by Hurricane Wilma in 2005 were pre-HUD homes (those manufactured prior to 1994). The damage reported from Palm Beach County included damage caused by metal roofs on mobile homes coming off exposing the inside of the mobile home to hurricane force winds. Also, in Palm Beach County, many pre-HUD homes had their walls torn off of the particle board floors that had deteriorated under the walls. Only post-HUD mobile homes impacted by storm surge moved on their foundation. Some pre-HUD mobile homes moved on their foundation. The report found damage to mobile home from home additions, such as carports and awnings, to both pre-HUD and HUD manufactured homes.

The DHSMV report from the 2004 hurricanes revealed similar results. In general, post-1994 mobile homes remained intact with minor to no damage, homes installed pursuant to DHSMV's uniform mobile home installation rule (promulgated in 1999) remained on their foundation with no movement with the exception of three homes impacted by high velocity wave action from Hurricane Ivan, mobile home additions caused damage to mobile homes, and many of the mobile homes destroyed by the 2004 hurricanes were installed prior to the adoption of the DHSMV uniform installation rule.

Once a mobile homeowner completes the program created by the bill, the bill requires Citizens to grant insurance discounts, credits, or other rate differentials or hurricane deductible reductions for the mobile homeowner's insurance premium for the year the program is completed and for subsequent years if the homeowner renews his or her property insurance with Citizens. As stated previously, current law requires insurers to grant insurance discounts or credits for mitigation, but requires the property owner to self-certify some mitigation features and requires inspection and certification by a qualified inspector/contractor for other mitigation features.

The bill requires Citizens' property insurance premiums to reflect the location of the home and the home's compliance with the Florida Building Code adopted after Hurricane Andrew.

The bill requires the \$2.8 million currently being provided for the mobile home tie-down program under s. 215.559, F.S. to continue to be funded (in addition to the \$7.5 million funding for mobile home hurricane mitigation under this bill).

IV. Constitutional Issues:

A. Municipality/County Mandates Restrictions:

None.

B. Public Records/Open Meetings Issues:

None.

C. Trust Funds Restrictions:

None.

V. Economic Impact and Fiscal Note:

A. Tax/Fee Issues:

None.

B. Private Sector Impact:

Mobile homeowners, mobile home parks, and mobile home communities would be eligible for funding via the grant program for hurricane mitigation features. It is unknown how many mobile homeowners, parks, or communities will participate in the program.

Similarly, it is unknown how much each owner, park, or community will receive as this number depends on how many owners, parks, or communities take advantage of the program and if TCC puts a maximum amount on the amount each recipient receives when they set up and implement the program.

It is also unknown how much insurance premiums will be reduced by requiring Citizens to offer discounts, credits, or other rate differentials for policyholders who complete the mitigation program.

C. Government Sector Impact:

The bill requires an appropriation of \$7.5 million out of the General Revenue Fund for fiscal year 2006-2007 to TCC for establishment, implementation, performance, and maintenance of the program.

VI. Technical Deficiencies:

None.

VII. Related Issues:

None.

VIII. Summary of Amendments:

Barcode #973752 by Community Affairs:

Clarifies that Citizens Property Insurance shall grant *actuarially reasonable* discounts for manufactured and mobile homes *on which fixtures or construction techniques demonstrated to reduce the amount of loss in a windstorm have been installed.*

Barcode #084076 by Community Affairs:

Requires Tallahassee Community College to prepare and submit an annual report on the Manufactured Housing and Mobile Home Mitigation and Enhancement Program to the Governor, Senate President, and Speaker of the House of Representatives.

This Senate staff analysis does not reflect the intent or official position of the bill's introducer or the Florida Senate.
