

The Florida Senate
BILL ANALYSIS AND FISCAL IMPACT STATEMENT

(This document is based on the provisions contained in the legislation as of the latest date listed below.)

Prepared By: The Professional Staff of the Committee on Fiscal Policy

BILL: CS/CS/CS/SB 296

INTRODUCER: Fiscal Policy Committee (Recommended Favorable by the Appropriations Subcommittee on Health and Human Services); Governmental Oversight and Accountability Committee; Health Policy Committee; and Senator Garcia and others

SUBJECT: Diabetes Advisory Council

DATE: March 19, 2015

REVISED: _____

ANALYST	STAFF DIRECTOR	REFERENCE	ACTION
1. Lloyd	Stovall	HP	Fav/CS
2. Peacock	McVaney	GO	Fav/CS
3. Brown	Pigott	AHS	Recommend: Favorable
4. Pace	Hrdlicka	FP	Fav/CS

Please see Section IX. for Additional Information:

COMMITTEE SUBSTITUTE - Technical Changes

I. Summary:

CS/CS/CS/SB 296 creates a process for ongoing assessment of the state's diabetes-related activities. The bill directs the Diabetes Advisory Council, in conjunction with the Department of Health, the Agency for Health Care Administration, and the Department of Management Services, to prepare a report regarding the impact of diabetes on state-funded or operated programs, including Medicaid, the State Group Insurance Program, and public health programs.

The report is due to the Governor, the President of the Senate, and the Speaker of the House of Representatives by January 10 of each odd-numbered year.

The bill also modifies the composition of the Diabetes Advisory Council to include one member from at least three of the medical schools in the state and adds a representative of the American Association of Diabetes Educators to the list of possible members.

The bill has an indeterminate fiscal impact.

II. Present Situation:

Diabetes is a group of diseases in which the body produces too little insulin,¹ is unable to use insulin efficiently, or both. When diabetes is not controlled, glucose and fats remain in the blood and eventually cause damage to vital organs.

The most common forms of diabetes are:

- **Type 1:** Sometimes known as juvenile diabetes, type 1 is usually first diagnosed in children and adolescents and accounts for about five percent of all diagnosed cases. Type 1 diabetes is an autoimmune disease in which the body's own immune system destroys cells in the pancreas that produce insulin. Type 1 may be caused by genetic, environmental, or other risk factors. At this time, there are no methods to prevent or cure type 1 diabetes, and treatment requires the use of insulin by injection or pump.
- **Type 2:** Sometimes known as adult-onset diabetes, type 2 accounts for about 95 percent of diagnosed diabetes in adults and is usually associated with older age, obesity, lack of physical activity, family history, or a personal history of gestational diabetes. Studies have shown that healthy eating, regular physical activity, and weight loss can prevent or delay the onset of type 2 diabetes or eliminate the symptoms and effects post-onset.
- **Gestational diabetes:** This type of diabetes develops and is diagnosed as a result of pregnancy in 2 to 10 percent of pregnant women. Gestational diabetes can cause health problems during pregnancy for both the child and mother. Children whose mothers have gestational diabetes have an increased risk of developing obesity and type 2 diabetes.²

Complications of diabetes include: heart disease, stroke, high blood pressure (hypertension), blindness and other eye problems, kidney disease, nervous system disease, vascular disorders, and amputations.³ Death rates for heart disease and the risk of stroke are about two to four times higher among adults with diabetes than among those without diabetes.⁴ Diabetes and its potential health consequences can be managed through physical activity, diet, self-management training, and, when necessary, medication.⁵

People with “pre-diabetes” are at high risk of developing type 2 diabetes or heart disease or having a stroke.⁶ Their blood glucose levels are higher than normal but not high enough to be classified as diabetes.⁷ Although an estimated 33 percent of adults in the United States have pre-diabetes, less than 10 percent of them report having been told they have the condition.⁸ Thus, awareness of the risk is low. People with pre-diabetes who lose five to seven percent of their

¹ Insulin is a hormone that allows glucose (sugar) to enter cells and be converted to energy.

body weight and get at least 150 minutes per week of moderate physical activity can reduce the risk of developing type 2 diabetes by 58 percent.⁹

Risk factors for type 2 diabetes include:

- Being over the age of 45;
- Being overweight;
- Having a parent or sibling with type 2 diabetes;
- Having a minority family background;
- Developing gestational diabetes;
- Giving birth to a baby weighing nine pounds or more; and
- Being physically active less than three times per week.¹⁰

Persons with any of the above risk factors are also at risk of developing pre-diabetes.¹¹ Individuals with pre-diabetes are 5 to 15 times more likely to develop type 2 diabetes or heart disease or have a stroke.¹² The Centers for Disease Control (CDC) estimates that as many as one out of every three American adults has pre-diabetes and half of all Americans aged 65 years and older have pre-diabetes.¹³

The CDC reports that minorities have a higher prevalence of diabetes than whites, and some minorities have higher rates of diabetes-related complications and death. Non-Hispanic black, Hispanic, and American Indian/Alaska Native adults are about twice as likely to have diagnosed diabetes as non-Hispanic white adults.¹⁴

In 2013, the American Diabetes Association released a report updating its earlier studies (2002, 2007) estimating the economic burden of diagnosed diabetes. In 2012, the total estimated cost of diagnosed diabetes in the United States was \$245 billion, including \$176 billion in direct medical costs and \$69 billion in reduced productivity. This represents a 41 percent increase over the 2007 estimate. The largest components of these costs are hospital inpatient care (43 percent) and medications to treat complications (18 percent). People with diagnosed diabetes incur average medical costs of about \$13,700 per year, of which about \$7,900 is attributed to diabetes. Care for people with diagnosed diabetes accounts for more than one in five dollars spent on health care in the United States, and more than half of that is directly attributable to diabetes. Overall, average medical expenses for a person with diabetes are 2.3 times higher than they are for a person without diabetes.¹⁵

Diabetes in Florida

Diabetes was the sixth leading cause of death in 2013 in Florida.¹⁶ In prior years, diabetes had been the seventh leading cause of death, moving up to sixth in 2012. As a percent of total deaths in the state, diabetes accounted for 2.9 percent of all deaths, and over a three-year period (2011-2013) diabetes had an age-adjusted death rate per 100,000 of 19.6 or 15,317 deaths.¹⁷

Florida's population base also includes large concentrations of groups that have been identified as "at risk" for diabetes. In 2013, only 35 percent of Floridians were at a healthy weight, with 25 percent identified as obese and the remaining 40 percent classified as overweight.¹⁸ If Floridians follow the current trend, by 2030, almost 60 percent of the population will be obese.¹⁹

Diabetes Advisory Council

The Diabetes Advisory Council (council) has been established to guide statewide policy on diabetes prevention, diagnosis, education, care, treatment, impact, and costs.²⁰ It serves in an advisory capacity to the Department of Health, other agencies, and the public.²¹ The council consists of 26 members appointed by the Governor who have experience related to diabetes.²² Twenty-one of the members are representatives of a broad range of health and public health-related interests, based on specific requirements related to employer, education, or professional relationships.²³ The remaining five members are representatives of the general public, at least three of whom are affected by diabetes.²⁴ The Council meets annually with the State Surgeon General to make recommendations regarding the public health aspects of the prevention and control of diabetes.²⁵

Florida Diabetes Prevention and Control

The Bureau of Chronic Disease Prevention and Health Promotion (bureau) within the DOH was established in 1998 to improve individual and community health by preventing and reducing the

impact of chronic diseases and disabling conditions, including diabetes. Diabetes-related activities of the bureau include:

- Providing support to the Diabetes Advisory Council and the Florida Alliance for Diabetes Prevention and Care;
- Compiling, analyzing, translating, and distributing diabetes data;
- Increasing access to diabetes self-management education;
- Increasing access to diabetes medical care by advocating for the use of community health workers;
- Preventing diabetes in populations disproportionately affected by diabetes;
- Increasing diagnosis and treatment for pre-diabetes; and
- Managing the Insulin Distribution Program.²⁶

The Office of Minority Health administers the Closing the Gap grant program, which seeks to improve health outcomes and eliminate racial and ethnic health disparities in Florida by providing grants to increase community-based health promotion and disease prevention activities relating to, among other issues, diabetes.²⁷

Medicaid

Medicaid is a joint program of the federal and state governments that provides health care for low income individuals. Florida's Medicaid program is administered by the Agency for Health Care Administration and financed with federal and state funds.²⁸ Over 3.7 million Floridians are currently enrolled in Medicaid, and the program's estimated expenditures for Fiscal Year 2014-2015 are approximately \$23.3 billion.²⁹ The statutory authority for the Medicaid program is contained in ch. 409, F.S.

State Group Insurance Program

The Department of Management Services administers the State Group Health Insurance program, a package of insurance plans offered to active and retired state employees and their families.³⁰ As implemented by the DMS, the program offers four types of health plans from which an eligible employee may choose: a standard statewide Preferred Provider Organization (PPO) Plan, a Health Investor PPO Plan, a standard Health Maintenance Organization (HMO) Plan, and a Health Investor HMO Plan. In Fiscal Year 2013-2014, the State Group Insurance Program covered 171,908 members at a cost of \$1.96 billion.³¹

III. Effect of Proposed Changes:

The bill directs the Diabetes Advisory Council, in conjunction with the Department of Health, the Agency for Health Care Administration, and the Department of Management Services, to submit a report by January 10, in each odd-numbered year, to the Governor, the President of the Senate, and the Speaker of the House of Representatives, regarding the impact of diabetes on state-funded or operated programs. Specifically, the report must include:

- Information on the public health consequences and financial impact of diabetes and the resulting health complications on the state, including the number of persons covered by Medicaid and the State Group Insurance Program and the number of persons impacted by state diabetes programs and activities;
- A description and assessment of the effectiveness of diabetes programs and activities implemented by the state agencies, the amount and sources of funding, and the cost savings achieved;
- A description of the coordination among state agencies of programs, activities, and communications related to diabetes management, prevention, and treatment; and
- A detailed action plan for reducing and controlling the number of new cases of diabetes, including action steps to reduce negative impacts, expected outcomes of the plan, and benchmarks for preventing and controlling diabetes.

The Governor's authority to appoint members to the Diabetes Advisory Council is modified to:

- Require the Governor to appoint one member each from at least three of the medical schools in the state;
- Reduce the number of appointed members from the broad range of health and public health-related interests from 26 to 18;
- Restrict the 18 members to one from each listed health and public health-related interest; and
- The qualifying relationships for members of the council are expanded to include the American Association of Diabetes Educators.

The bill has an effective date of July 1, 2015.

IV. Constitutional Issues:

A. Municipality/County Mandates Restrictions:

This bill does not contain a mandate because the bill does not affect counties or municipalities.

B. Public Records/Open Meetings Issues:

None.

C. Trust Funds Restrictions:

None.

V. Fiscal Impact Statement:**A. Tax/Fee Issues:**

None.

B. Private Sector Impact:

None known.

C. Government Sector Impact:

The bill will have no fiscal impact on the DOH in its capacity as staff to support to the Diabetes Advisory Council. While the creation of the biennial report may require significant DOH staff time to generate, the DOH reports that such time may be absorbed within existing resources.³²

The DMS reports that the bill will have an indeterminate fiscal impact on the department.³³

The ACHA reports that the bill will require no additional expenditures to produce the biennial report and that the “data related to the number of Medicaid covered recipients with diabetes as required for the report is available through the agency’s existing data and staff resources.”³⁴

VI. Technical Deficiencies:

None.

VII. Related Issues:

None.

VIII. Statutes Affected:

This bill substantially amends section 385.203 of the Florida Statutes.

³³ Florida Department of Management Services, *Senate Bill 296 Analysis* (January 9, 2015) (on file with the Senate Committee on Health Policy).

³⁴ Florida Agency for Health Care Administration, *Senate Bill 296 Analysis* (January 27, 2015) (on file with the Senate Fiscal Policy Committee).

IX. Additional Information:

- A. **Committee Substitute – Statement of Changes:**
(Summarizing differences between the Committee Substitute and the prior version of the bill.)

CS/CS/CS by Fiscal Policy on March 19, 2015:

The committee substitute makes technical changes to the directory clause.

CS/CS by Governmental Oversight and Accountability on March 4, 2015:

The Governor's authority to appoint members to the Diabetes Advisory Council is modified to require the Governor to appoint one member each from at least three of the medical schools in the state, to appoint not more than 18 members, and not more than one each from specific employer, education and professional relationships. In addition, the qualifying relationships for members of the council are expanded to include the American Association of Diabetes Educators.

CS by Health Policy on February 17, 2015:

The committee substitute identifies who *may* serve on the Diabetes Advisory Council rather than *must*, and adds a representative of the American Association of Diabetes Educators to the list of possible members.

- B. **Amendments:**

None.
