## SUMMARY

### Effect of the Bill:

HB 1443 requires the Florida Institute for Parkinson's Disease within the University of South Florida (USF) to establish and maintain a statewide Parkinson's disease registry. The University must provide regular reports on the data collected to the Board. The bill requires the Institute to create and maintain a public webpage dedicated to the Parkinson's Disease Registry beginning January 1, 2028, to be updated yearly.

The bill requires, beginning January 1, 2027, allopathic (MD) and osteopathic (DO) diagnosing primary treating physicians or advanced practice registered nurses who diagnose or treat a patient with Parkinson's disease to regularly report nationally recognized Parkinson's disease performance measures to the registry. The bill grants liability protection from damages or any other relief for physicians who provide information to the registry.

The bill requires the President of the Senate and the Speaker of the House of Representatives to appoint one member each to the Board. Board members, other than those appointed by the President of the Senate and the Speaker of the House of Representatives, are required to have experience as a movement disorder specialist, in informatics or population health research and Parkinson's disease research.

Beginning October 15, 2028, the bill requires the annual report due each October 15 to include a summary of the prevalence of Parkinson's disease by county and certain demographic information.

### Fiscal or Economic Impact:

The bill has a negative fiscal impact on the Institute within USF related to the creation and maintenance of the Parkinson's disease registry and webpage. This impact is subject to a specific appropriation.

[BILL HISTORY](#)

## ANALYSIS

### EFFECT OF THE BILL:

The bill requires the [Florida Institute for Parkinson's Disease](#) (Institute) within the University of South Florida (USF) to, subject to a specific appropriation, establish and maintain a statewide [Parkinson's disease registry](#). The Institute is required to use nationally recognized guidelines to collect performance measures from physicians and regularly report such data. Such performance measures must be maintained by the registry and made available for use to improve or modify the Parkinson's disease care system, ensure compliance with standards and nationally recognized guidelines, and monitor patient outcomes. (Section [4](#))

Beginning January 1, 2028, the Florida Institute for Parkinson's Disease within the University of South Florida shall create and maintain a public webpage for the Parkinson's Disease Registry, which must include annual reports, information on the consortium, and any other information as determined by the board, to be updated every year. (Section [4](#))

**STORAGE NAME:** h1443b.HCB

**DATE:** 2/6/2026

The bill requires, beginning January 1, 2027 (Section [1](#)), allopathic (MD) and osteopathic (DO)<sup>1</sup> physicians (Section [2](#)), as well as advanced practice registered nurses<sup>2</sup> (Section [3](#)) who diagnose or treat a patient with [Parkinson's disease](#) to regularly report nationally recognized Parkinson's disease performance measures to the registry. The bill grants liability protection from damages or any other relief for physicians who provide information to the registry.

The bill adds two new members to the Board, one appointed by the President of the Senate and one appointed by the Speaker of the House of Representatives. (Section [4](#))

The bill requires that Board members, other than those appointed by the President of the Senate or the Speaker of the House of Representatives, must have experience as a movement disorder specialist, in informatics or population health research and Parkinson's disease research. (Section [4](#))

Beginning October 15, 2028, the bill requires the annual report that is due October 15 to include a summary update on the incidence and prevalence of Parkinson's disease in the state by county, how many records are included and demographic information, such as patients by age, gender and race. (Section [4](#))

The bill is effective July 1, 2026.

## FISCAL OR ECONOMIC IMPACT:

### STATE GOVERNMENT:

The Florida Institute for Parkinson's Disease within the University of South Florida will incur a negative fiscal impact related to establishing and maintaining the Parkinson's disease registry and webpage. This impact is subject to a specific appropriation.<sup>3</sup>

## RELEVANT INFORMATION

### SUBJECT OVERVIEW:

#### [Parkinson's Disease](#)

Parkinson's disease is a progressive neurological disorder that impacts an individual's nervous system and causes unintended and slow movements, such as tremors, stiffness, and difficulty with balance.<sup>4</sup> Individuals with Parkinson's disease may have trouble walking, talking, and completing day-to-day tasks.

The exact cause of Parkinson's disease is unknown.<sup>5</sup> However, some studies have shown that Parkinson's disease is partially caused by damaged or dead neurons within the *substantia nigra*, which is an area of the brain that controls movement.<sup>6</sup> The neurons in this area produce dopamine that send signals to parts of the body to complete movements. However, neurons reduce their dopamine production when they become damaged or die, resulting in

<sup>1</sup> Chapter 458, F.S., establishes the requirements for licensure as an allopathic physician while chapter 459, F.S., establishes the requirement for licensure as an osteopathic physician.

<sup>2</sup> Chapter 464, F.S., establishes the requirements for licensure of advanced practice registered nurses.

<sup>3</sup> The cost for the Parkinson's disease registry is currently unknown, however, Florida currently operates the [Florida Stroke Registry](#) at the University of Miami, the [Birth Defects Registry](#) at the University of South Florida, and the [Brain Tumor Registry](#) at the University of Florida. In Fiscal Year 2025-2026, the Legislature appropriated \$1.5M for the Stroke Registry, \$450,000 for the Birth Defects Registry, and \$500,000 for the Brain Tumor Registry. See [Ch. 2025-198, L.O.F.](#) line items 436, 511, and 514, respectively.

<sup>5</sup> National Institute on Aging, *Parkinson's Disease: Causes, Symptoms, and Treatments* (April 14, 2022), available at <https://www.nia.nih.gov/health/parkinsons-disease/parkinsons-disease-causes-symptoms-and-treatments> (last visited Feb. 2, 2026).

<sup>6</sup> *Id.*

limited movement control. Neurons may become damaged from buildup of protein particles, called Lewy Bodies, that are not properly disposed of within brain cells.

Some studies have also indicated that Parkinson's disease may be genetic. About 10 to 15 percent of Parkinson's disease is caused by genetics.<sup>7</sup> Seven genes are linked to causing or increasing the risk of being diagnosed with Parkinson's disease.<sup>8</sup> However, additional genes and environmental factors largely impact whether a genetic code leads to a diagnosis. Genetic testing is a recent development in Parkinson's disease research, and research on genetic origins is underdeveloped.

There is no cure for Parkinson's disease;<sup>9</sup> however, treatments and therapies can relieve some symptoms.<sup>10</sup> Most treatments focus on restoring dopamine in the brain through prescription medicines.<sup>11</sup> Individuals who cannot manage their symptoms through medication may seek relief through deep brain stimulation.<sup>12</sup> Deep brain stimulation requires surgical implants in a patient's brain and chest to stimulate affected parts of the brain with electrodes.

Approximately one million Americans are affected by Parkinson's disease, with an estimated 90,000 new diagnoses each year.<sup>13</sup> Florida has the highest percentage of state population with Parkinson's disease in the United States, with the disease impacting about 79,990 Floridians.<sup>14</sup> The primary risk factor is age, with Parkinson's disease risk increasing around ages 65-years and older.<sup>15</sup> About 21 percent of Floridian's population is 65-years or older, the second highest in the U.S.<sup>16</sup>

### Parkinson's Disease Registry

A disease registry is a centralized database for the collection of information of specific diseases.<sup>17</sup> Such information is collected from a patient and clinical perspective and can inform every stage of the therapy development process.<sup>18</sup>

There is no national Parkinson's Disease registry, but several states have created state specific registries.<sup>19</sup> Florida does not currently operate a Parkinson's Disease registry.

### Consortium for Parkinson's Disease Research

In 2025, the legislature created the Consortium for Parkinson's Disease Research (Consortium) within the University of South Florida (USF) comprised of public and private universities, and academic medical centers.<sup>20</sup> The

<sup>19</sup> American Parkinson Disease Association, *How many people have Parkinson's disease?*, available at <https://www.apdaparkinson.org/article/parkinsons-disease-registries/> (last visited Feb. 2, 2026). Fourteen states currently have Parkinson's disease registries (California, Connecticut, Delaware, Maryland, Missouri, Nebraska, New York, Nevada, Ohio, South Carolina, Utah, Virginia, Washington, and West Virginia).

purpose of the Consortium is to conduct and disseminate research on the causes, mechanisms, and potential treatments for Parkinson's Disease as well as the prevalence of Parkinson's Disease in first responders.<sup>21</sup>

### Parkinson's Disease Research Board

The Parkinson's Disease Research Board manages the Consortium's operations. Each year, the Board must adopt a Parkinson's disease research plan. The Board may adopt the Consortium's recommendation or create its own plan, provided it describes how the Consortium's research will contribute to knowledge of Parkinson's disease's causes, mechanisms, and treatments and the prevalence of Parkinson's disease in first responders.<sup>22</sup>

The Board consists of members representing participating universities or academic medical centers. Each president of the participating universities or academic medical centers appoints a member. No other entities are authorized to appoint members to the Board. Board members must have experience in scientific fields, such as neurology, psychology, nutrition, and genetics. Members serve a four-year term and may be reappointed.<sup>23</sup>

Board members are prohibited from being compensated for their role. However, reimbursement for travel expenses, provided the costs are authorized, necessarily incurred, and follow the rates of per diem requirements in [s. 112.061, F.S.](#) is permitted.<sup>24</sup>

The Board may create, amend, and repeal a charter to govern itself. The Board must select a chair from among its members who will serve a two-year term. All of the Board's actions require a majority vote of present members. The Board must meet at least semiannually, and four members constitute a quorum.<sup>25</sup> As of January, 2026, a Board has not been appointed and USF is in the process of identifying the individuals that will serve on the Board.<sup>26</sup>

The Board must submit an annual report to the Governor, President of the Senate, and the Speaker of the House by October 15 of each year describing the Consortium's current research projects and findings, community outreach initiatives, and future research programs.<sup>27</sup> USF issued the first report on October 15, 2025, which detailed the Consortium's mission purpose is to prioritize high-impact areas of Parkinson's disease research and disseminate the findings to improve the lives and outcomes of patients and families affected by Parkinson's disease. The report provided potential priority research projects, including the investigation of ways to reduce hazard exposure for certain high-risk populations, such as first responders, addressing tremors, and further research into pathological processes. The report also provided a prospective Board structure and potential appointees which includes, in addition to a Parkinson's disease patient or family member of a patient, a representative from:<sup>28</sup>

- The USF Morsani College of Medicine who shall serve as the initial chair;
- The University of Miami's Miller School of Medicine;
- The University of Florida's College of Medicine;
- The Michael J. Fox Foundation for Parkinson's Research; and
- The Parkinson's Foundation.

## Florida Institute for Parkinson's Disease

In 2025, the legislature created the Florida Institute for Parkinson's Disease within the University of South Florida (USF) as a statewide resource for Parkinson's disease and clinical care. The purpose of the institute is to find a cure for Parkinson's disease and to improve the quality of life and health outcomes for those affected by Parkinson's Disease.<sup>29</sup>
