

House Redistricting Subcommittee

Meeting Packet

Wednesday, November 3, 2011

8:00 AM

404 HOB

Committee Meeting Notice

HOUSE OF REPRESENTATIVES

House Redistricting Subcommittee

Start Date and Time: Thursday, November 03, 2011 08:00 am
End Date and Time: Thursday, November 03, 2011 10:00 am
Location: 404 HOB
Duration: 2.00 hrs

AGENDA:

Presentation and discussion of decision points and options for State House districts
Redistricting Data
Website Updates
Additional Committee Business

NOTICE FINALIZED on 10/27/2011 12:01 by Crofoot.Katie

Table of Contents

Tab 1 – Example of a Redistricting Bill’s Statistical Analysis

Tab 2 – PowerPoint Regarding Redistricting Bill’s Statistical Analysis

Tab 3 – Relevant Terminology

Tab 4 – Options for House Maps

Computer Analysis of SPUBC0104

Plan File Name: SPUBC0104

Plan Type: Congress - 27 Districts

Plan Population Fundamentals

Plan Geography Fundamentals:

Total Population Assigned: 18,801,310 of 18,801,310
 Ideal District Population: 696,344
 District Population Remainder: 22
 District Population Range: 696,344 to 696,345
 District Deviation Range: (0) To 1
 Deviation: (0) To 0.00 Total 0.00%

Census Blocks Assigned: 484,481 out of 484,481
 Number Non-Contiguous Sections: 1 (normally one)
 County or District Split : 21 Split of 67 used
 City or District Split : 77 Split of 411 used
 VTD's Split : 134 Split of 9,436 used

Number of Districts by Race Language

	20%-30%	30%-40%	40%-50%	50%-60%	60%+

Ponce de Leon|2111 of 598,

Ponce de Leon 2 11 of 598

Terms:

1. Total population assigned – This figure should always be 18,801,310 for a full plan. If it is low it means somewhere on the plan there are some blocks unassigned to a district.
2. Ideal district population – This is the number you get when you divide the total population (18,801,310) by the number of districts. This does not include the remainder of partial people.
3. District Population remainder – This is the number of people left over after dividing the States total population by the number of districts. In congressional plans this is the number of districts you will have to add a person to get evenly distributed population among the districts.
4. District population range – This is the range between the district with the least people in the district and the district with the most people in the district.
5. District population deviation – The number of people under and over the ideal district population.
6. Deviation – The percentage of people over and under the district ideal population. The total deviation is the absolute value of the percentage of the population under and the percentage of the population over added together.
7. Census blocks assigned – The number of census blocks assigned. If every census block is assigned this number should be 484,481 for a full plan.
8. Non-contiguous sections – This is where parts of a district do not connect to each other. In a finished plan this number should be one. The Dry Tortugas do not connect and is the one non – contiguous geography.
9. Split geography – This is the number of geographic polygons that have parts of their populations split into 2 different districts. If the district can fit fully in the county or city and yet part of the county or city is not used by the district then this is **NOT** counted. When listing the splits in the report the name is listed first then a bar ‘|’ comes next and then the total splits in the geography. Followed by another bar ‘|’ the population the district has in the geography and the total population for that piece of geography. Example: Ponce de Leon|2|11 of 598
10. City splits – Only incorporated cities and towns that are recognized by Florida Law are included in this number. Census designated places are not included.
11. VTD – This stands for Voter Tabulation Districts. These are areas that the each County Supervisor of Election has designated that if used are to minimize the dividing of neighborhoods and the invariant drawing of Congressional, House and Senate lines within close proximity so as to isolate small groups of voters that would need a special ballot that may lead to the revealing of their vote.
12. VAP – This stands for Voting Age Population. Other than total population, most of the numbers in this report are done based on voting age population.
13. Current Black VAP – This refers to the Census Black Voting Age Population of the current map in Census 2012 numbers.
14. New Black VAP – This is the Black Voting Age Population of the new district that the report is based on.
15. Spatial measurements – These are measurements that measure geography (physical area) rather than population based measurements

16. Base shapes – Are the underlying district shapes.
17. Perimeter – This is the distance in miles that you would have to travel if you went all the way around a geographic shape.
18. Simplified perimeter – This is the computer generated simplified border or perimeter of the district. This is used to help adjust the numbers for districts that borders follow rivers and water so they are not penalized by districts that follow an interstate.
19. Area – This is the area in square miles of the underlying geography.
20. P/A – This is a shorthand meaning perimeter divided by the area
21. P_c/P – This is shorthand meaning the perimeter on the circle or convex hull depending on the section divided by perimeter.
22. A/A_c - This is shorthand meaning the area of the district divided by the circle or convex hull depending area.
23. W+H – This is the simple width plus the height on the district added together.
24. Width – Means the distance in miles from the most western part of the district to the most eastern part of the district in a straight east to west line.
25. Height – Height here means the distance in miles from the most northern part of the district to the most southern part of the district in straight up and down line.
26. Circle –Dispersion – The smallest circle that completely encloses a district is one of the shapes that many compactness measures use to compare to the district to measure how dispersed the district is. The closer the district shapes is to the circle or convex hull, the better the district for those that use this kind of compactness measure. A square or the circle with the same perimeter as the district are other similar measures.
27. Convex Hull – Indentation – A convex hull measured against the district is the other major shape that is used to measure the amount of indents or fingers that a district has. It draws an outline around the district and measures that shape.
28. Population density measures – These are measures that try to measure the closeness of people to each other. They are population and distance based rather than shape based.
29. Straight line in miles apart – This is a measure that we have made on each district that measures the distance between the center of each census VTD and each other VTD in the district. Then the population used by the district in each VTD is added together. The resulting population number is then combined for each VTD combination in the district. A second number is made by take the miles between each VTD and multiplying it by the population. The totals of these numbers are then divided to come up with the average distance someone would have to travel in a straight line to reach all the voters in the district. The lower this number the more compact the district. In the report the number for population, VAP Black and Hispanic should all be about the same. If they are not you may want to look to see if a community is somehow being dispersed.
30. Miles to drive by fastest route – This measure is much like the Straight line measure but is based on the drive time between the VTD center points instead of a straight line measure. When this point and the straight line measure are very different you may want to look at the districts to see if you are cutting off voters by an interstate, intercostals waterway or some other barrier.

31. Minutes to drive by fastest route – this is the same as above but with the minutes that will be needed by people to reach the other parts of the district rather than miles.
32. District core – The core of the district is a traditional redistricting standard that tells the number of people that the new district being reported on has in common with the current district. The core is the district that has the most people in common, NOT the district with the same district number.
33. Common pop – The population that both districts have in common.
34. % of black VAP – In the core report this is the percent of Black in the core section that the 2 plans have in common. This is the same for the % of Hispanic VAP
35. Haitian POP – This number is based on the 2009 American Community Survey that gives you a general idea of the number of Haitians in a particular area.
36. W.Indies POP – This is from the American Community Survey and is a general number of people from the different West Indies populations.
37. Reading plan splits – In the last report you can see the cores of the different plans that make up the new district and what percent of the new district is made from the various current districts.

Palm Beach County

Current State House Map (2002)

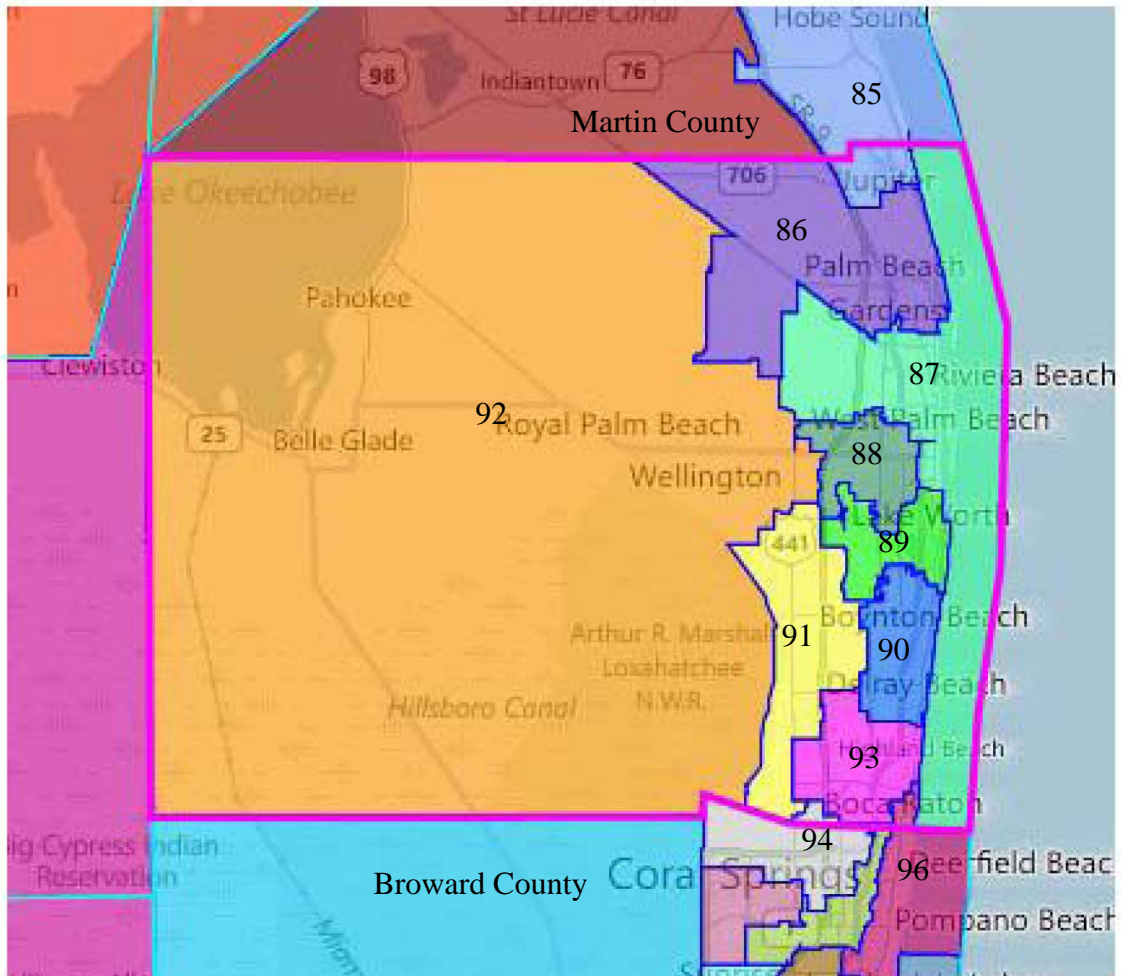

Currently, Palm Beach County has a population of 1,320,143, which is enough for roughly 8.4 House districts, depending on how many county splits you have. Thinking that at least one district will need to share portions of Palm Beach County with a neighboring county, it is important that all of these counties be viewed from the regional perspective.

The populations of the counties neighboring Palm Beach County are:

- Martin County 146,318
- Broward County 1,748,066
- Hendry County 39,140

HPUB0107 Mr. John Libby

 - Black VAP: 5.30%
 - Hispanic VAP: 13.42%

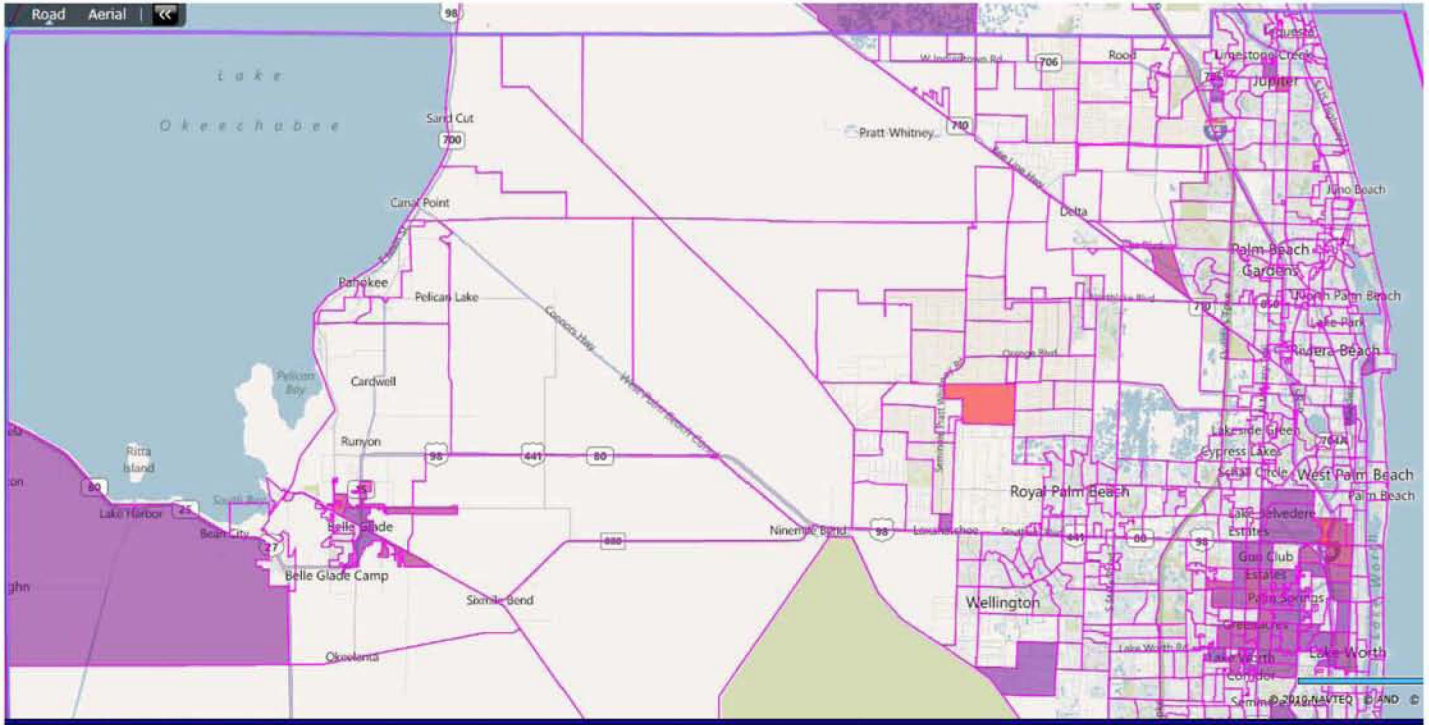

Palm Beach County currently has one majority-minority Black districts (District 84). Below is a map of the northern half of Palm Beach County with all VTDs with a Black VAP percentage of 40 or greater.

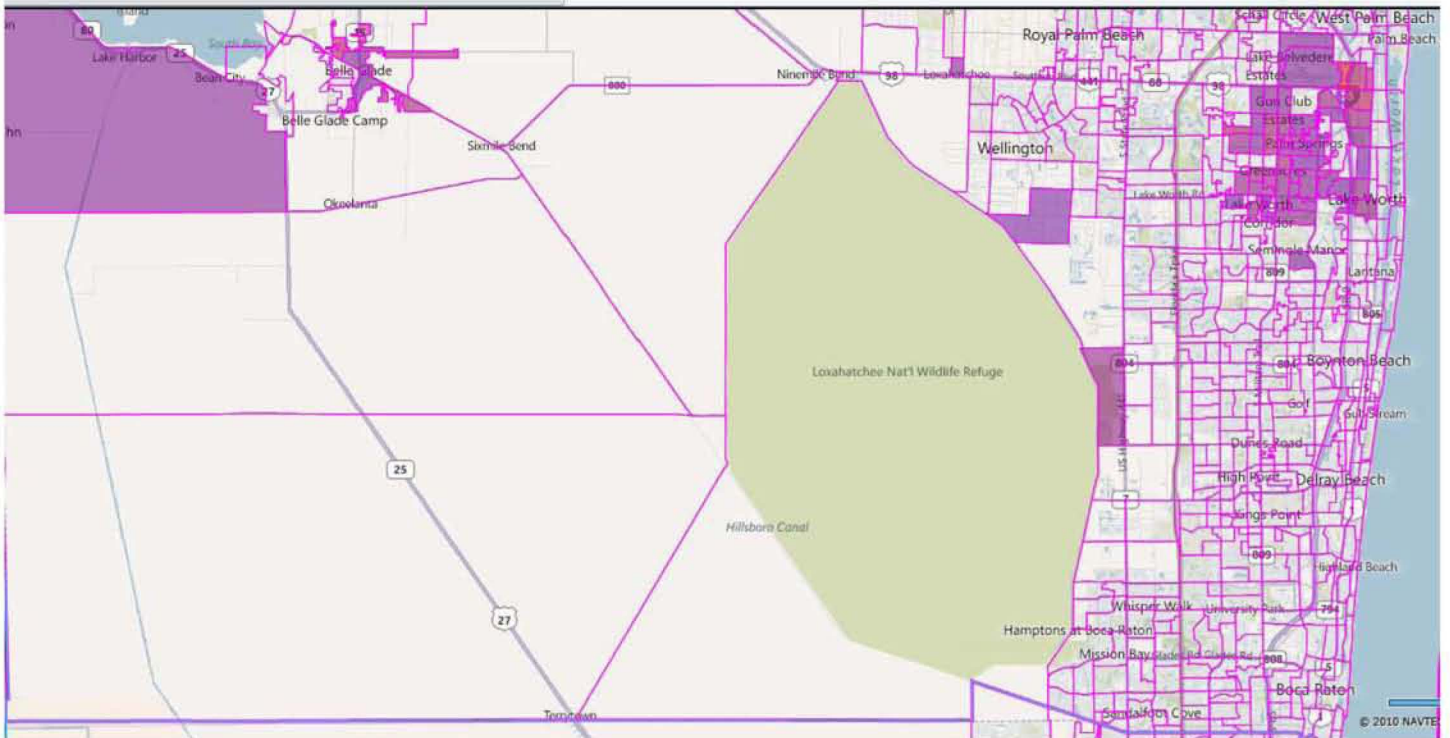

Below is a map of the southern half of Palm Beach County with all VTDs with a Black VAP percentage of 40 or greater.

According to the 2010 Census, Palm Beach County has a Hispanic Voting Age Population of 180,155, which is over the ideal population of a House district. The map below illustrates the VTDs that have a Hispanic Voting Age Population of 40% or greater in northern Palm Beach County.

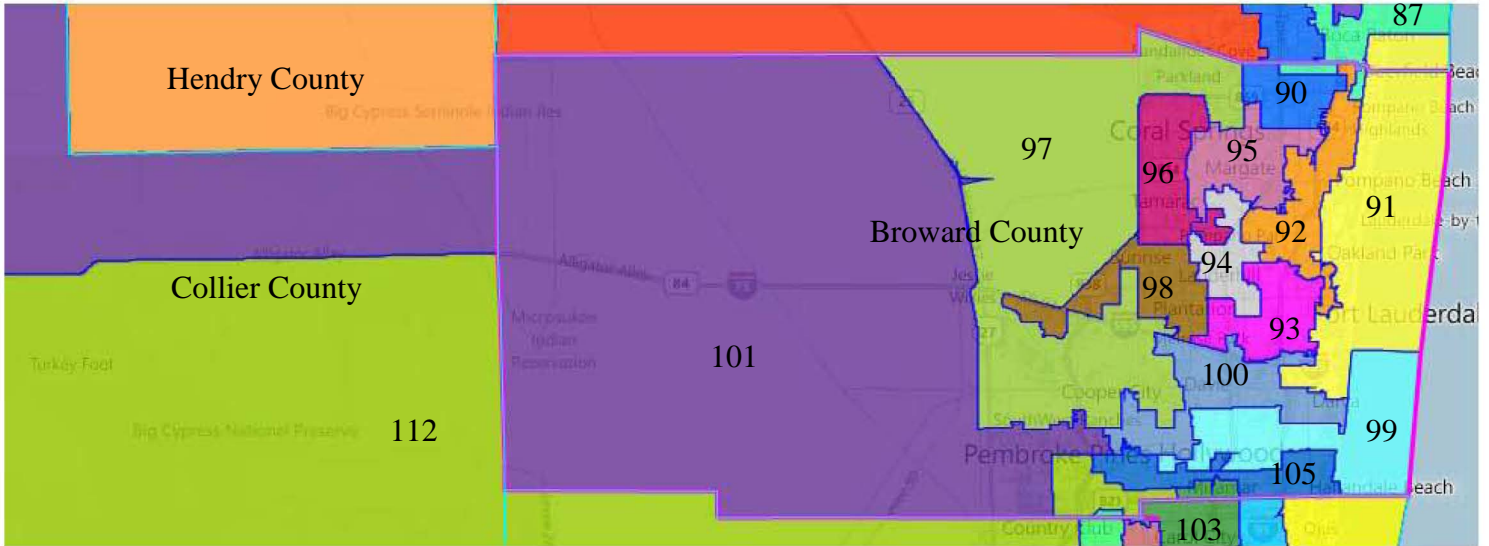

Below is a map of southern Palm Beach County that illustrates the VTDs that have a Hispanic Voting Age Population of 40% or greater.

Broward County

Current State House Map (2002)

102

Currently, Broward County has a population of 1,748,066, which is enough for roughly 11.2 House districts, depending on how many county splits you have. Thinking that at least one district will need to share portions of Broward County with a neighboring county, it is important that all of these counties be viewed from the regional perspective.

The populations of the counties neighboring Orange County are:

- Palm Beach County 1,320,134
- Hendry County 39,140
- Collier County 321,520
- Miami-Dade County 2,496,435

The City of Fort Lauderdale

Policy Issues:

- The population of the City of Fort Lauderdale is too large for the ideal population of a House district and must be split.

- House District 92:
 - Population Deviation: 2 or

 - Hispanic VAP: 26.12%

- House District 103:
 - Population Deviation: 0 or 0%
 - Black VAP: 8.09%
 - Hispanic VAP: 84.65%

- House District 104:
 - Population Deviation: 1 or
 - Black VAP: 16.64%
 - Hispanic VAP: 79.15%

- House District 106:
 - Population Deviation: 1 or
 - Black VAP: 76.32%
 - Hispanic VAP: 20.69%

- House District 107:
 - Population Deviation: 1 or
 - Black VAP: 24.74%
 - Hispanic VAP: 32.64%

- House District 118:
 - Population Deviation: 0 or 0%
 - Black VAP: 13.30%
 - Hispanic VAP: 44.80%

Currently, Broward County has two majority-minority Black districts that are wholly within the County (Districts 92 and 93), one majority-minority Black district that is partially within the County (District 103) and two districts that could be considered a Black-access district (Districts 92 and 105). The map below illustrates the VTDs that have a Black Voting Age Population above 40%.

According to the 2010 Census, Broward County has a Hispanic Voting Age Population of 327,009, which is over the ideal population of a House district. Broward County also has two majority-minority Hispanic Districts that are partially contained within it (Districts 102 and 112). The map below illustrates the VTDs that have a Hispanic Voting Age Population of 40% or greater.

Miami-Dade County

Current State House Map (2002)

Currently, Miami-Dade County has a population of 2,496,435, which is the population for 15.93 districts, depending on how many splits each county would have.

The populations of the counties neighboring the Tampa Bay area are:

- Broward County 1,748,066
- Collier County 321,520
- Monroe County 73,090

The Cities of Miami and Hialeah

Policy Issues:

- Both the populations of the City of Miami and the City of Hialeah are too large for a House district and both cities need to be split.

- House District 99:
 - Population Deviation: 1,077 or .69%
 - Black VAP: 16.60%
 - Hispanic VAP: 35.20%

- House District 102:
 - Population Deviation: -1,619 or -1.03%
 - Black VAP: 3.23%
 - Hispanic VAP: 92.93%

 - Black VAP: 5.78%
 - Hispanic VAP: 81.08%

- House District 116:
 - Population Deviation: -600 or -.38%
 - Black VAP: 16.61%
 - Hispanic VAP: 67.70%

- House District 117:
 - Population Deviation: 808 or .52%
 - Black VAP: 26.17%
 - Hispanic VAP: 51.76%

- House District 118:
 - Population Deviation: 719 or .46%
 - Black VAP: 13.45%
 - Hispanic VAP: 37.99%

Miami-Dade County has three districts that are majority-minority Black districts wholly within the County (District 104, 108 and 109), one majority-minority Black district that has portions of the County (District 103), and one district that traditionally elects an African-American to the House (District 118). The map below illustrates the VTDs that have a Black Voting Age Population above 40%.

Currently, Miami-Dade County has nine majority-minority Hispanic districts that are wholly within the County (Districts 107, 110, 111, 113, 114, 115, 116, 117, and 119) and two majority-minority Hispanic districts that are in portions of the County. Below is map of the VTDs that have a Hispanic VAP of 40% or greater.

Tradeoffs Between Whole Counties Versus Cross-Jurisdictional Communities

Example #1: Linking Northern Palm Beach County to Martin County

During the public hearing in Palm Beach County, we heard from a few who testified, including Palm Beach County, about linking the communities of northern Palm Beach County to Martin County. Here is what the two counties look like:

Policy Issues:

- Martin County has enough of a population for .93 House districts and could be kept whole in a House plan.
- Palm Beach County has enough of a population for 8.43 House districts and has to be split in a House plan.

By looking at the populations of the two counties, it is possible to link northern Palm Beach to Martin County and Martin County could be kept whole in the district. It could look like this:

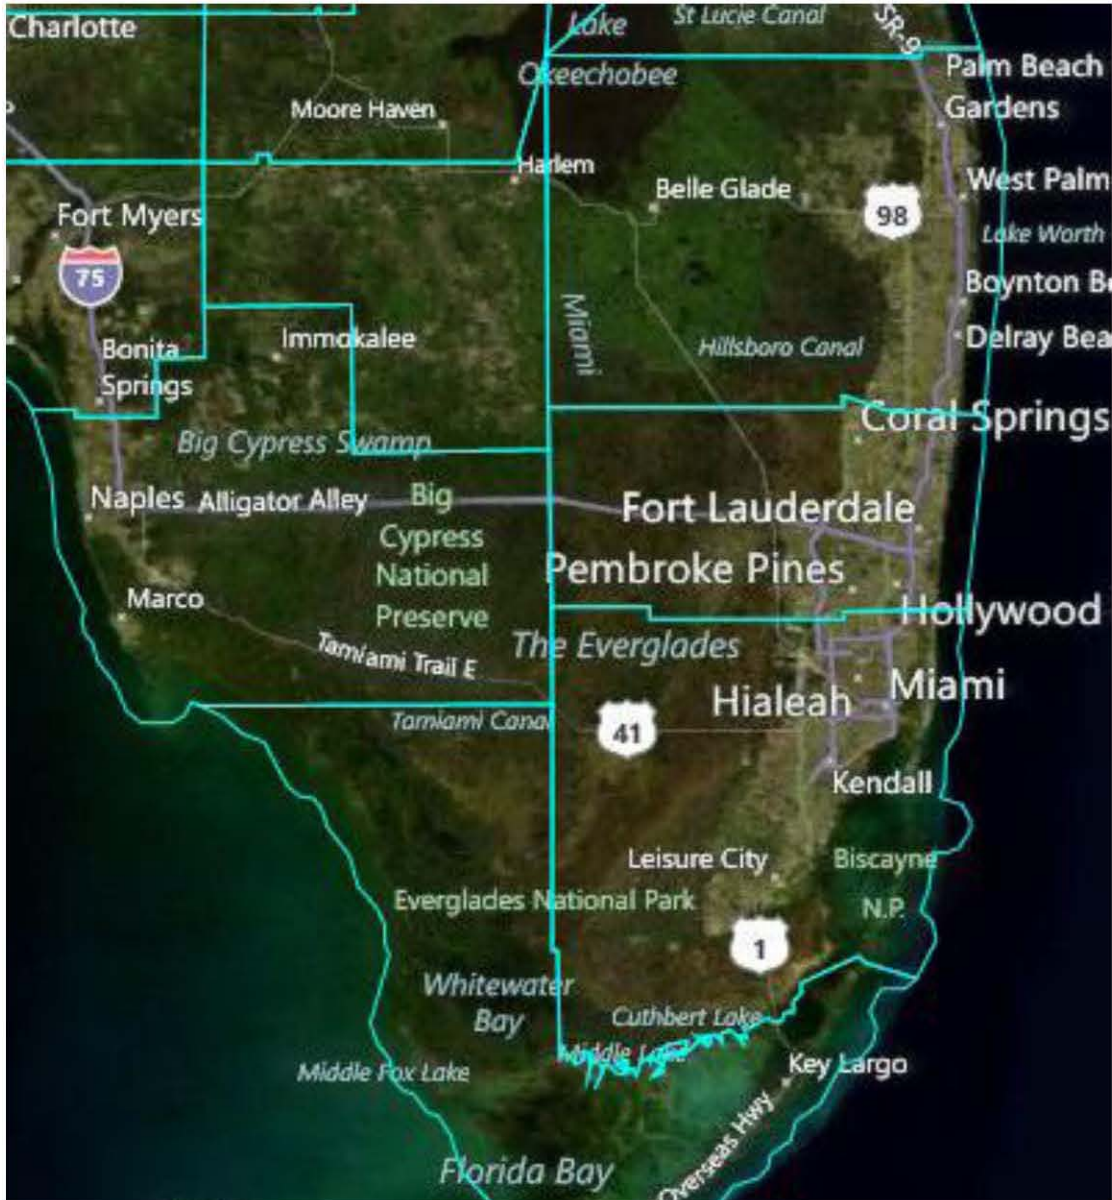

Policy Issues:

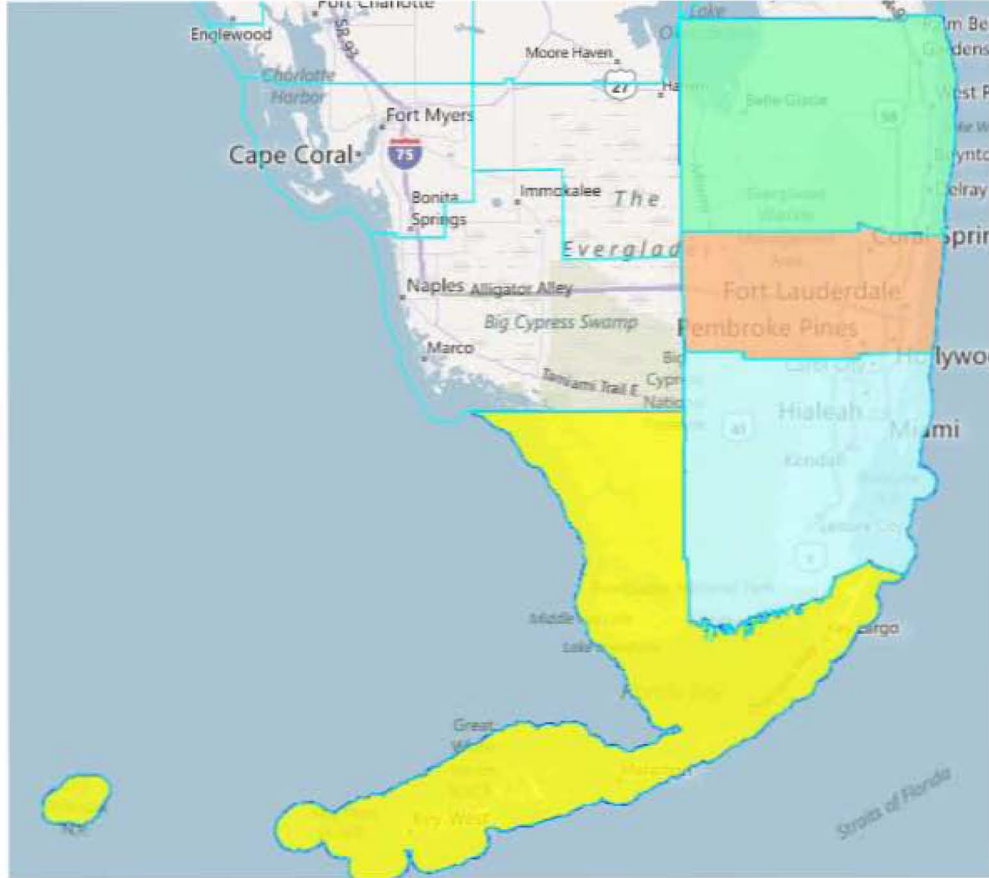

- The population deviation for the district above is +769.
- The district keeps the Town of Tequesta and the Jupiter Inlet Colony whole within the district as well as uses the city boundary lines for the City of Jupiter as its southern boundary.
- Of the two counties, Martin County is the only one that can be kept whole and it is kept whole in this district above.

Example #2: The Everglades

The Everglades marsh (also known as the “River of Grass”), as well as Everglades National Park, are located in Palm Beach, Broward, Miami-Dade and Monroe counties and looks somewhat like this:

Palm Beach, Broward, Miami-Dade and Monroe Counties look like this:

Policy Issues:

- Palm Beach County has the population of 8.43 House districts and could be kept whole within a House plan.
- Broward County has the population of 11.16 House districts and would need to be split within a House plan.
- Miami-Dade County has the population of 15.93 House districts and would need to be split within a House plan.
- Monroe County has the population of .47 House districts and could be kept whole within a House plan.

Given the populations of both counties, a district could be built that contains The Everglades into a district while keeping Monroe County whole. It would look something like this:

Policy Issues:

- The population for the district above is 74,531, which is less than half of the population needed for a House district. More areas and people would need to be added to the district to complete it.
- The only county that contains The Everglades that can be kept whole within a House plan, Monroe County, is kept whole within the district above while keeping the cross-county jurisdiction of The Everglades all within a district as well.

Example #3: Lake Okeechobee

Lake Okeechobee is in parts of Okeechobee, Martin, Palm Beach, Hendry, and Glades Counties and looks like this:

Okeechobee, Martin, Palm Beach, Hendry and Glades Counties look like this:

Policy Issues:

- The population of Okeechobee County is enough for .25 House districts and could be kept whole within a House plan.
- The population of Martin County is enough for .93 House districts and could be kept whole within a House plan.
- The population of Palm Beach County is enough for 8.43 House districts and would need to be split within a House plan.
- The population of Hendry County is enough for .25 House districts and could be kept whole within a House plan.
- The population of Glades County is enough for .08 House districts and could be kept whole within a House plan.

A district that kept all of the possible counties whole while including the VTDs in the county that needs to be split (Palm Beach County) that cover Lake Okeechobee would look like this:

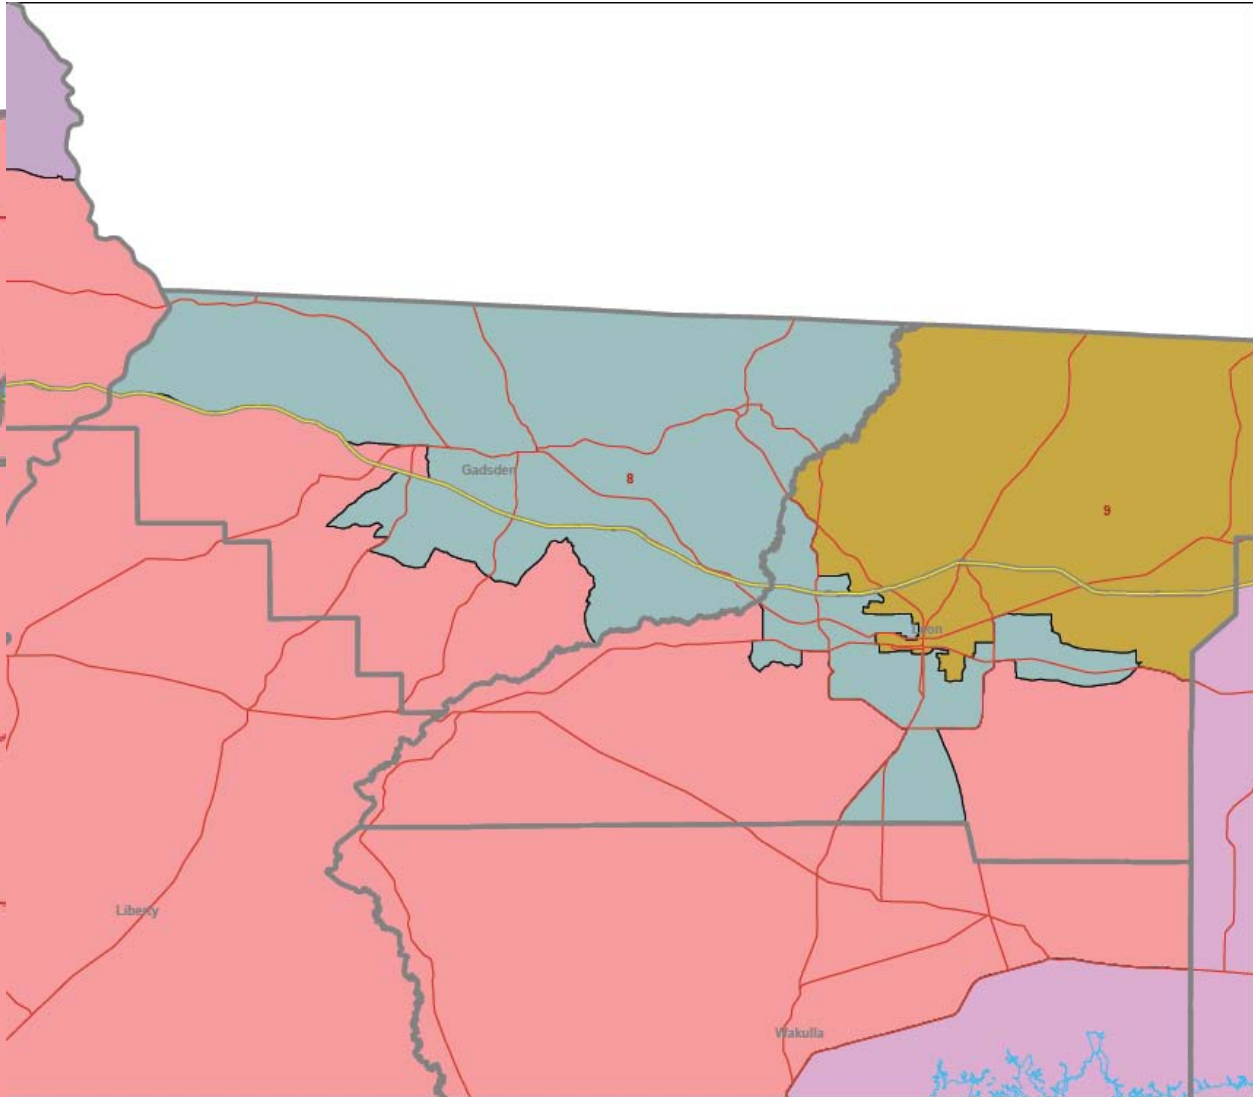

Policy Issues:

- The population of the district above is 238,338 which is too large for the ideal population of a House district.
- In order to meet the ideal population for a House district while keep all of Lake Okeechobee within that district, one or more of the counties that could be kept whole within a House plan (Okeechobee, Martin, Hendry or Glades) would need to be split.
- This is an example of where a trade-off would potentially need to occur between keeping a county whole versus keeping an environmental area together within a district.

Options for Racial and Language Minority Communities

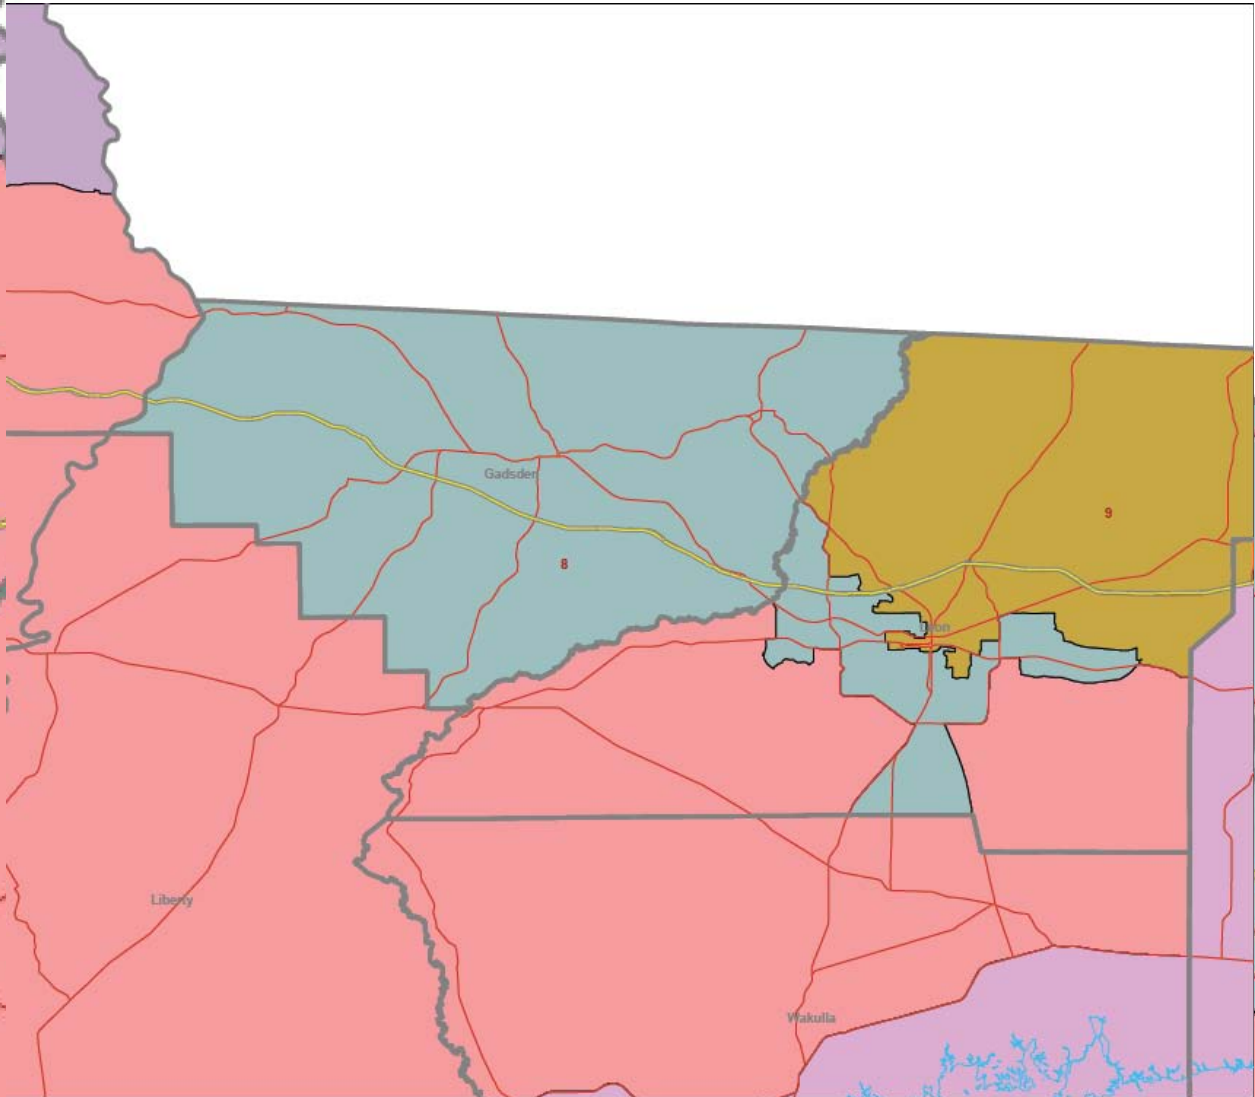

House District 8 currently looks like this:

Policy Issues:

- Currently, the district has a population deviation of -3743 and has a Black VAP of 51.18%.
- The district is in both Leon and Gadsden Counties. Based on their populations, Leon County must be split in a House plan, while Gadsden County does not have to be.

Taking the current boundaries of District 8 and adding all of Gadsden County to it would look like this:

Policy Issues:

- The district pictured above has a population deviation of 944 and has a Black VAP of 50.23%, still making it a majority-minority district. In 2010, the percent of registered voters that were Black was 51.53%.

House District 23 currently looks like this:

Policy Issues:

- The population deviation for the district above is -14,029 and it has a Black VAP of 30.94%.
- The district is both Alachua and Marion Counties, both of which have populations that are too large for the ideal population for a House district and must be split.

House District 27 currently looks like this:

Policy Issues:

- The population deviation for the district above is -24,922 and it has a Black VAP of 22.68%. In 2002, the district had a Black VAP of 19.64%.
- The district is wholly within Volusia County, which is a county that has too large of a population for the ideal population for a House district and must be split in a House plan.
